

Finger Exercises Lecture 8

The questions below are due on Wednesday October 05, 2022; 03:00:00 PM.

1) Question 1 of 1

Implement the function that meets the specification below:

```
def same_chars(s1, s2):  
    """  
    s1 and s2 are strings  
    Returns boolean True if a character in s1 is also in s2, and vice  
    versa. If a character only exists in one of s1 or s2, returns False.  
    """  
    # Your code here  
  
# Examples:  
print(same_chars("abc", "cab")) # prints True  
print(same_chars("abccc", "caaab")) # prints True  
print(same_chars("abcd", "cabaa")) # prints False  
print(same_chars("abcabc", "cabz")) # prints False
```

```
1 | # your function here
```

You have infinitely many submissions remaining.

Here is the solution we wrote:

```
def same_chars(s1, s2):  
    for i in s1:  
        if i not in s2:  
            return False  
    for i in s2:  
        if i not in s1:  
            return False  
    return True
```
